COMPANY

FROM THE VERY BEGINNING

Founded in 1976 and backed by over 40 years of experience, Lignec has established itself as a quality leader in the industry. The company, which was acquired in 2008, has successfully expanded its range of services over the years, hiring experienced staff and continually investing in equipment as part of its ongoing commitment to exceeding customer expectations.

Initially specialized in medium-voltage distribution lines, the company later branched out into all energy sectors, including hydroelectric plants, wind farms, and medium-voltage transmission and distribution lines. We serve the largest private and public sector organizations in the energy, metallurgical, and petrochemical sectors, as well as manufacturing, mining, and paper companies throughout Quebec.

Today, Lignec is the go-to provider for turnkey electric power projects in Quebec and across Canada.

OUR COMMITMENT

A BROAD SKILL SET

At Lignec, we manage your electric power projects every step of the way, adjusting as we go to your requirements. Our greatest asset is our team of skilled managers, engineers, and professionals whose solid, multidisciplinary expertise lets us excel in every aspect of electric power.

OUTSTANDING SERVICE

Electric power facilities require first-class execution. We draw on the expertise we've acquired over the years to develop innovative solutions tailored to your specific needs. At Lignec, we know the industry inside and out and are proud to offer comprehensive and reliable professional service.

HEALTH, SAFETY, AND THE ENVIRONMENT

We abide by all laws, regulations, standards, and emergency procedures to protect the health and safety of our staff. We make sure all our employees have the up-to-date training and skills they need to safely manage our worksites.

FOLLOWING THROUGH ON OUR COMMITMENTS

Each and every Lignec team member understands the importance of meeting our commitments as an organization. Together, we're driven by the desire to succeed and determined to overcome any and all challenges on the way.

CONSTRUCTION

TOTAL SOLUTIONS

Our vast portfolio of projects is testimony to our wide-ranging expertise. At Lignec, we've done power line installation work both for public utilities and private enterprises such as aluminum smelters, pulp and paper mills, and mining operations.

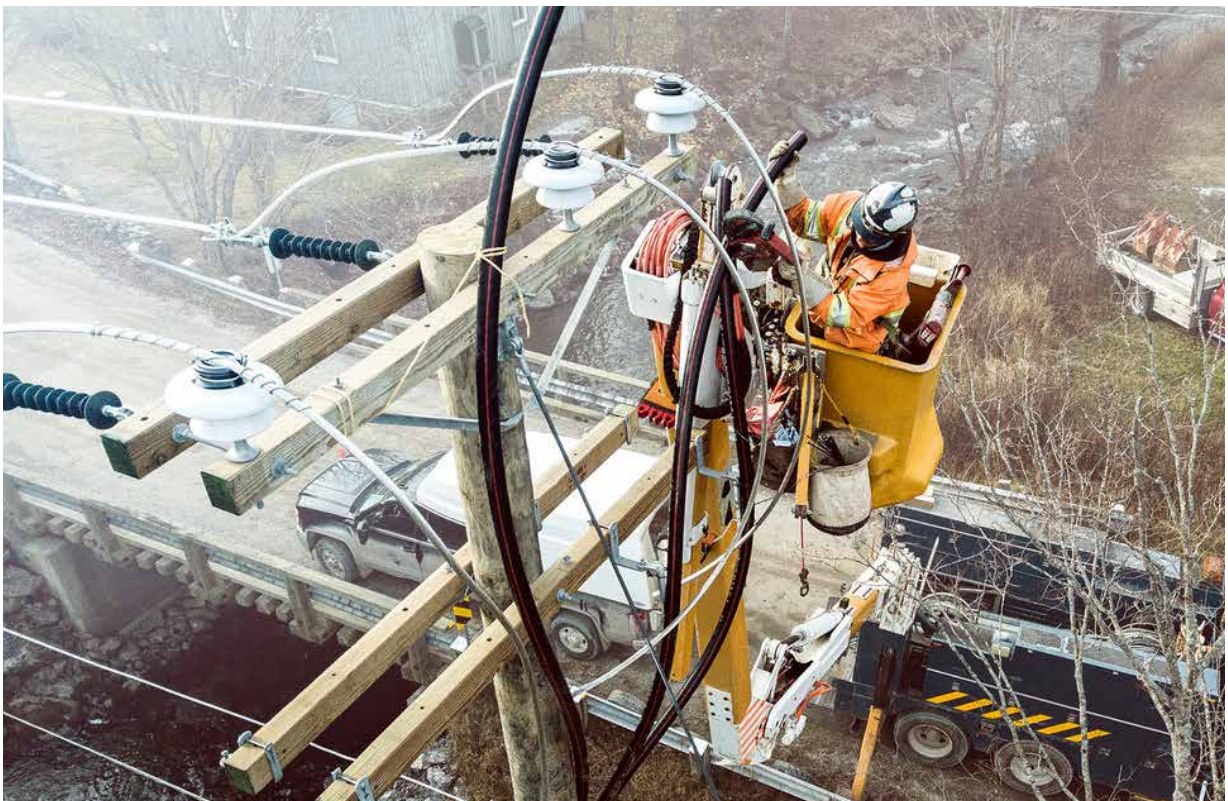

And as renewable energy has developed in recent years, we've become the go-to resource for wind, solar, and hydroelectric projects.

In addition to our construction expertise in substations and underground and overhead power networks, we've also assembled a civil and electrical engineering team in order to provide you with total solutions for all your projects.

DISTRIBUTION AND TRANSMISSION LINES

We provide comprehensive integrated solutions for all your overhead and underground power line projects. From project design with our engineering team through to supply and assembly by our team of lineworkers and electricians, you can count on Lignec for prompt, professional customer service. We also offer maintenance, inspection, and testing services (isolators, wood poles, cables, etc.) for your existing network.

SUBSTATION CONSTRUCTION

We can mobilize experienced teams to install and connect power equipment in factories, prefabricated substations, or outdoor substations. Our strength lies in the skills of our professionals and their experience in a wide variety of fields. Our specialists take pride in working closely together to meet our customers' objectives.

For large-scale construction sites, we can set up temporary electric power facilities and help ensure everything goes smoothly with the energy supplier.

WIND FARMS

Lignec has the expertise not only to perform studies but also to design, engineer, and build substations and collection systems for wind farms. In fact, we've pioneered the art of building wind farm power collection systems in Quebec. With nearly a dozen projects under our belt totaling over 2,000 MW and top-notch service from our teams of professionals, you won't find better expertise anywhere, wherever your project is in Canada.

FIBER OPTIC INSTALLATION

When it comes to fiber optics, Lignec has the expertise you need for both direct burial or conduit installation. We have invested in cutting-edge cable installation (blowing/jetting) equipment so we can offer competitive service and advanced solutions. This allows us to perform installation quickly and cost-effectively.

HYDROELECTRIC PLANTS

Backed by top industry experts, we have completed over 50 hydroelectric station projects over the past 25 years, including a number of turnkey projects. Our multidisciplinary teams handle every step of the process, from studies, design, and engineering to automation, data acquisition and control, construction, electrical installation, and commissioning.

A TEAM OF SPECIALISTS

We have the qualified professionals and cutting-edge equipment needed to complete your projects. A team of engineers, lineworkers, and electricians ensures prompt, professional, competitive service.

The logo for LIGNEC CONSTRUCTION features a stylized lightning bolt icon on the left, composed of three parallel diagonal lines. To the right of the icon, the word "LIGNEC" is written in a large, bold, sans-serif font, and the word "CONSTRUCTION" is written below it in a smaller, bold, sans-serif font.
