HERMSDORF, ALLEMAGNE**

****Version française à venir****

TRIDELTA provides arresters for every requirement. Our products are especially developed for service in all environmental conditions around the world. They are successfully installed in coastal and desert regions, in areas with high industrial air pollution, heavy windload and extreme climatic conditions, in seismic zones and other areas that require special protection.

TRIDELTA arresters protect outdoor equipment such as transformers, motors, generators, traction vehicles or other equipment from atmospheric and switching overvoltages.
