

TRANSMAG

ENERGY

REFURBISHMENT OF OVERHEAD-TYPE AND MEDIUM VOLTAGE DISTRIBUTION TRANSFORMERS

Transmag is, of course, the specialist in the design and custom manufacturing of liquid-insulated power transformers.

But also, an expert in the refurbishment of overhead transformers.

NEW FACTORY

Our new plant in Sainte-Agathe-de-Lotbinière specializes in the refurbishment, repair and maintenance of overhead and medium voltage distribution transformers.

REFURBISHMENT OF OVERHEAD-TYPE AND MEDIUM-VOLTAGE DISTRIBUTION TRANSFORMERS

With more than 10 years of experience, Transmag Énergie has now expanded its product line by adding the refurbishment of overhead type and medium voltage transformers.

Refurbishments are options frequently used by our customers and often represent a way to make substantial savings while participating in the environmental effort.

We carry out a complete inspection, preliminary tests, in-depth cleaning, an exhaustive analysis of each component and replace them if necessary, to finish with the aesthetic and protection portion with a new coating and paint, and all that according to your priority needs and within very reasonable deadlines.

With our new factory of more than 25,000 square feet, entirely dedicated to transformer refurbishments, we can now supply up to 2000 units annually.

Our production processes, built with the latest technical and technological innovations, allow us to ensure the highest quality standards required by Hydro-Québec standards.

Certified ISO-9001, our company follows rigorous planning with computerized monitoring at all stages of production.

Repaired and refurbished equipment is fully tested at our factory and comes with a warranty.

RELIABILITY

PROFESSIONALISM

QUALITY

A COMPLEX DEDICATED TO REPAIRS

Supported by state-of-the-art technologies, our experts work in the most cared-for environment, equipped with tools, machinery, equipment and testing instruments that meet the industry's high standards.

TEST LABORATORY

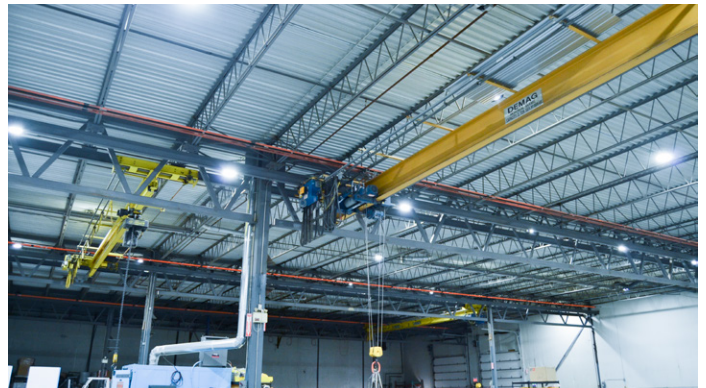

Our engineering department provides customers with our brand new test laboratory, a test laboratory equipped with the latest technologies, allowing us to test a multitude of network equipment.

BRIDGE CRANE

The 3 cranes allow an optimal repair flow which reduces repair times and unnecessary handling of transformers being refurbished.

It allows our employees to work safely while reducing repair time at the factory.

WELDING AND PAINTING

Depending on the technical requirements of the repair and the desired finish, the expert welders at Transmag make sure to offer their customers certified welds that meet the highest standards in our industry.

The painting process does indeed play a big role in maintaining the integrity of transformers. Industrial corrosion protection protects your equipment against atmospheric effects. A high quality industrial paint will be used and applied according to the best techniques certified by Hydro-Québec and will provide you with durable coverage and long-term protection of your equipment.
